THE AMERICAN ASSOCIATION OF COLLEGES FOR TEACHER EDUCATION

The American Association of Colleges for Teacher Education is a national voluntary association of colleges and universities organized to improve the quality of institutional programs of teacher education. All types of four-year institutions for higher education are represented in the present membership. These include private and church-related liberal arts colleges, state teachers colleges, state colleges, state universities, private and church-related universities, and municipal universities. The teacher education programs offered by the member institutions are varied. Only one uniform theme dominates the AACTE--the devotion to ever-improving quality in the education of teachers.

TEACHER PRODUCTIVITY--1966

A Report of AACTE Member Institutions and Non-Member Institutions By the Number of Persons Eligible in 1966 for Initial Teacher Certification And the Total Number of Graduate Degrees in the Field of Education

FOREWORD

Annually The American Association of Colleges for Teacher Education receives information from its member institutions and from non-member institutions known to be preparing teachers regarding their enrollments, the kinds of programs they offer, and the number of degrees awarded during the previous academic year and summer sessions. For this year, the AACTE report form has been modified in order to facilitate the reporting of expanding programs in teacher education and to refine the categorization of initially-certified teachers. Thus, the information received, and eventually reported, by AACTE encourages a multi-faceted analysis of teacher productivity in higher education.

This year's summary of institutional reports for the period September 1, 1965, through September 1, 1966, presents in detail the following information: (a) the number of undergraduates who completed requirements for initial certification in the areas of nursery school education, elementary school education, junior high school education, high school education, and special education; (b) the number of potential new teachers initially certified in Master of Arts in Teaching programs (or their equivalent); and (c) the number of master's degrees, sixth-year degrees, and doctor's degrees in the field of education.

Report forms were received from 901 institutions of higher education. This figure includes returns from 725 AACTE member institutions and 176 non-member institutions. Data from individual institutions (member and non-member) are reported by states in Part I of the report. State totals for both member and non-member institutions are grouped by regions and are reported in Part II of the report. Part III lists a portion of the member institutions which appropriately might be called "major producers" of initially certified teachers and of advanced degree recipients.

Because the initially-certified teacher (designated "new teacher" in *Teacher Productivity--1965*) is the primary focus of this report, *totals* for data pertaining to initial certification always are given in the shaded column of the report form. This makes possible the rapid apprehension of total "teacher productivity" for a given institution, state, or region. These totals comprise the figures given for the areas of the undergraduate program *and* for the Master of Arts in Teaching program. However, these figures, when totaled, may sometimes be larger or smaller than the total given in the shaded column. In the first instance, the difference may be attributed to the fact that some teachers are certified in more than one area; in the second, to the fact that other programs leading to initial certification are offered by an institution but are not included as part of the data requested on the report.

Occasionally, a figure will be reported in parentheses. This indicates that a program is offered by an institution in the particular area under which the figure is listed, but that the figure itself has already been included in another column. This occurred most often for the area of "Special Education."

It is hoped that this teacher productivity report will provide information which may be used and analyzed by persons interested in the production of teachers for our schools and colleges. It is hoped that both member and non-member institutions will continue to be instrumental in increasing the quantity, while improving the quality, of this production. Finally, it is hoped that the increase of 5032 "new" teachers between last year's report and this one will represent a continuing trend in teacher productivity.

The Association recognizes the efforts of Joseph F. Metz, Junior, in editing Teacher Productivity--1966. It is appropriate also to acknowledge the cooperation of college and university officials who provided the original data.
